Memo to File:

Re: Merd Corporation (MERC0)
Spectrum Quarry Mine
Millard County
ACT/027/003

A site inspection of this stone quarry operation was performed on July 12, 1978 by Ron Daniels and Jim Smith. We were met by a gentlemen named Bob who provided us with some general information concerning the operation, qualities of the stone, and market for the product which is called Cambillian. This stone is used mainly as a flooring tile.

The area has been previously mined and is currently being mined. There is a fairly steep road from the surface facility area to the top of the hill immediately west where active stripping of the hill is occurring. Overburden is being dumped over the western edge of the hill; provision should be made to conserve this material for reclamation purposes.

Presently there are more than two (2) acres of surface disturbance. The surface facilities include a shop, building, trailer, several stockpiles and an airstrip.

Further action on this plan is pending the arrival of a detailed map, a completed MR-2, and a commitment to Rule M-10 which was requested in a letter to Mr. Jerome C. Gatto dated June 16, 1978.
